Art Unit: 1634

DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I, claims 1-3, 7, and 8, in the reply filed on 02 August 2006 is acknowledged.

2. Claims 4-6 and 9-11 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made without traverse in the reply filed on 02 August 2006.

Specification

- 3. The disclosure is objected to because it contains an embedded hyperlink and/or other form of browser-executable code. Applicant is required to delete the embedded hyperlink and/or other form of browser-executable code. See MPEP § 608.01.
- 4. This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.
- 5. The title of the elected invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Objections

6. Claims 3 and 8 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or

Application/Control Number: 10/801,544 Page 3

Art Unit: 1634

rewrite the claim(s) in independent form. Claims 1 and 7, from which claims 3 and 8 respectively depend, recite the 'gel" as being something other than a gel. Such language effectively expands, not further limits the scope of claims 1 and 7.

Claim Rejections - 35 USC § 112

- 7. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 8. Claims 1- 3, 7 and 8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 9. Claims 1-3, 7, and 8 are confusing as to what constitutes the metes and bounds of a "gel." In considering claims 3 and 8, it appears that the "gel" need not be any form of a gel.
- 10. Claim 3 is indefinite with respect to what constitutes the metes and bounds of "very small."
- 11. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 12. Claims 1-3, 7 and 8 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter that was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the

claimed invention. Attention is directed to the decision in *University of Rochester v. G.D. Searle* & Co. 68 USPQ2D 1424 (Fed. Cir. 2004) at 1428:

To satisfy the written-description requirement, the specification must describe every element of the claimed invention in sufficient detail so that one of ordinary skill in the art would recognize that the inventor possessed the claimed invention at the time of filing. Vas-Cath, 935 F.3d at 1563; see also Lockwood v. American Airlines, Inc., 107 F.3d 1565, 1572 [41 USPQ2d 1961] (Fed. Cir. 1997) (patent specification must describe an invention and do so in sufficient detail that one skilled in the art can clearly conclude that "the inventor invented the claimed invention"); In re Gosteli, 872 F.2d 1008, 1012 [10 USPQ2d 1614] (Fed. Cir. 1989) ("the description must clearly allow persons of ordinary skill in the art to recognize that [the inventor] invented what is claimed"). Thus, an applicant complies with the written-description requirement "by describing the invention, with all its claimed limitations, not that which makes it obvious," and by using "such descriptive means as words, structures, figures, diagrams, formulas, etc., that set forth the claimed invention." Lockwood, 107 F.3d at 1572.

- 13. For purposes of examination, the claims have been interpreted as encompassing the separation and purification of any biological polymer so long as it has a net negative charge wherein said biopolymer can have virtually any size or mass.
- 14. The claims clearly require in at lest one embodiment the use of various gels and multiple electrophoretic fields.
- 15. The specification has not been found to provide any examples as to how the claimed invention is to be practiced. Further, the specification has not been found to set forth a full, concise and exact description of the invention as to just how any biopolymer is to be separated and purified in a reproducible manner.
- 16. While electrophoresis is to be utilized, and that there can be a cavity between gel segments, the specification is effectively silent as to how highly similar molecules are to be separated and purified when at least a portion of the population of molecules would co-migrate.

Art Unit: 1634

Attention is directed to the decision of *Vas-Cath Inc. v. Mahurkar* 19 USPQ2d 1111 (CAFC, 1991):

This court in *Wilder* (and the CCPA before it) clearly recognized, and we hereby reaffirm, that 35 USC 112, first paragraph, requires a "written description of the invention" which is separate and distinct from the enablement requirement. The purpose of the "written description" requirement is broader than to merely explain how to "make and use"; the "applicant must also convey with reasonable clarity to those skilled in the art that, as of the filing date sought, he or she was in possession of the invention. The invention is, for purposes of the "written description" inquiry, whatever is now claimed.

17. It appears that applicant is attempting to satisfy the written description requirement of 35 USC 112, first paragraph, through obviousness. Obviousness, however, cannot be relied upon for satisfaction of the written description requirement. In support of this position, attention is directed to the decision in *University of California v. Eli Lilly and Co.* (Fed. Cir. 1997) 43 USPQ2d at 1405, citing *Lockwood v. American Airlines Inc.* (Fed. Cir. 1997) 41 USPQ2d at 1966:

Recently, we held that a description which renders obvious a claimed invention is not sufficient to satisfy the written description requirement of that invention.

- 18. For the above reasons, and in the absence of convincing evidence to the contrary, claims 1-3, 7 and 8 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement.
- 19. Claims 1-3, 7, and 8 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter that was not described in the specification in such a way as to enable one skilled in the art to which it pertains,

Application/Control Number: 10/801,544

Art Unit: 1634

or with which it is most nearly connected, to make and/or use the invention. As set forth in *Enzo Biochem Inc.*, v. Calgene, Inc. (CAFC, 1999) 52 USPQ2d at 1135, bridging to 1136:

Page 6

To be enabling, the specification of a patent must teach those skilled in the art how to make and use the full scope of the claimed invention without 'undue experimentation.' " Genentech, Inc. v. Novo Nordisk, A/S, 108 F.3d 1361, 1365, 42 USPQ2d 1001, 1004 (Fed. Cir. 1997) (quoting In re Wright, 999 F.2d 1557, 1561, 27 USPQ2d 1510, 1513 (Fed. Cir. 1993)). Whether claims are sufficiently enabled by a disclosure in a specification is determined as of the date that the patent application was first filed, see Hybritech, Inc. v. Monoclonal Antibodies, Inc., 802 F.2d 1367, 1384, 231 USPQ 81, 94 (Fed. Cir. 1986).... We have held that a patent specification complies with the statute even if a "reasonable" amount of routine experimentation is required in order to practice a claimed invention, but that such experimentation must not be "undue." See, e.g., Wands, 858 F.2d at 736-37, 8 USPQ2d at 1404 ("Enablement is not precluded by the necessity for some experimentation ... However, experimentation needed to practice the invention must not be undue experimentation. The key word is 'undue,' not 'experimentation.' ") (footnotes, citations, and internal quotation marks omitted). In In re Wands, we set forth a number of factors which a court may consider in determining whether a disclosure would require undue experimentation. These factors were set forth as follows: (1) the quantity of experimentation necessary, (2) the amount of direction or guidance presented, (3) the presence or absence of working examples, (4) the nature of the invention, (5) the state of the prior art, (6) the relative skill of those in the art, (7) the predictability or unpredictability of the art, and (8) the breadth of the claims. *Id.* at 737, 8 USPQ2d at 1404. We have also noted that all of the factors need not be reviewed when determining whether a disclosure is enabling. See Amgen, Inc. v. Chugai Pharm. Co., Ltd., 927 F.2d 1200, 1213, 18 USPQ2d 1016, 1027 (Fed. Cir. 1991) (noting that the Wands factors "are illustrative, not mandatory. What is relevant depends on the facts.").

The amount of direction or guidance presented,

The amount of direction or guidance presented is very limited, and then comprises many forward-looking statements as to what could, or may be possible.

The presence or absence of working examples,

There are no working examples.

Application/Control Number: 10/801,544

Art Unit: 1634

The nature of the invention,

The invention relates to the separation and purification of biological polymers no matter how

close in size and charge they are.

The predictability or unpredictability of the art, and

The art has progressed to the point that certain problems are recognized and need to be

addressed. In support of this position, attention is directed to US Patent 6,617,118 B2 (Roffler et

al.) which discloses in column 1, bridging to column 2, that sodium dodecylsulfate

polyacrylamide gel electrophoresis can be used to measure the relative size of PEG-modified

proteins, but the mobility of PEG-modified proteins is slower than the expected molecular

weight. The instant disclosure is silent on this issue.

The mass and charge of nucleic acids that have the same A, T, C, and G composition cannot be

distinguished even though they have a different sequence or ordering of the nucleotides, and one

may be related to a disease and one not.

Phase-partitioning can be employed to measure PEG but the assay sensitivity is about 1 µg PEG.

The breadth of the claims.

The claimed method places no threshold, be it upper or lower, on the sensitivity of the method

of separation and purification. Likewise, the claims place no limits on the composition of the

biopolymer.

Page 7

In accordance with claim 2, the biopolymer is to be moved in three directions, which has been interpreted for purposes of examination as movement along three axes. The specification has not been found to teach such an embodiment.

The claims also encompass the preservation of biopolymers for an indefinite period, and the use of a variety of preserving fluids. The specification has not been found to set forth the reaction conditions and starting materials needed to practice the full scope of the claims.

The situation at hand is analogous to that in *Genentech v. Novo Nordisk A/S* 42 USPQ2d 1001.

As set forth in the decision of the Court:

"'[T]o be enabling, the specification of a patent must teach those skilled in the art how to make and use the full scope of the claimed invention without undue experimentation.' In re Wright 999 F.2d 1557, 1561, 27 USPQ2d 1510, 1513 (Fed. Cir. 1993); see also Amgen Inc. v. Chugai Pharms. Co., 927 F. 2d 1200, 1212, 18 USPQ2d 1016, 1026 (Fed Cir. 1991); In re Fisher, 427 F. 2d 833, 166 USPQ 18, 24 (CCPA 1970) ('[T]he scope of the claims must bear a reasonable correlation to the scope of enablement provided by the specification to persons of ordinary skill in the art.').

"Patent protection is granted in return for an enabling disclosure of an invention, not for vague intimations of general ideas that may or may not be workable. See Brenner v. Manson, 383 U.S. 519, 536, 148 USPQ 689, 696 (1966) (stating, in context of the utility requirement, that 'a patent is not a hunting license. It is not a reward for the search, but compensation for its successful conclusion.') Tossing out the mere germ of an idea does not constitute enabling disclosure. While every aspect of a generic claim certainly need not have been carried out by an inventor, or exemplified in the specification, reasonable detail must be provided in order to enable members of the public to understand and carry out the invention.

"It is true . . . that a specification need not disclose what is well known in the art. See, e.g., Hybritech, Inc. v. Monoclonal Antibodies, Inc., 802 F.2d 1367, 1385, 231 USPQ 81, 94 (Fed. Cir. 1986). However, that general, oft-repeated statement is merely a rule of supplementation, not a substitute for a basic enabling disclosure. It means that the omission of minor details does not cause a specification to fail to meet the enablement requirement. However, when there is no disclosure of any specific starting material or any of the conditions under

Art Unit: 1634

which a process can be carried out, undue experimentation is required; there is a failure to meet the enablement requirement that cannot be rectified by asserting that all the disclosure related to the process is within the skill of the art. It is the specification, not the knowledge of one skilled in the art, that must supply the novel aspects of an invention in order to constitute adequate enablement. This specification provides only a starting point, a direction for further research. (Emphasis added)

20. In view of the breadth of scope clamed, the limited guidance provided, the unpredictable nature of the art to which the claimed invention is directed, and in the absence of convincing evidence to the contrary, the claims are deemed to be non-enabled by the disclosure.

Claim Rejections - 35 USC § 102

21. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 22. Claims 1-3, 7 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent 4,863,582 (Wijangco et al.).
- Wijangco et al., columns 5-6, describes a method and related apparatus whereby a sample containing a heterogeneous mixture (e.g., cell lysate) is introduced to a device. Small molecules are removed from the device in one direction, the device is rotated, electric field is changed, and DNA is passed through the gel in another direction, eventually coming into contact with a membrane (applicant's porous filter), from which it is eluted and collected for storage or further testing (column 8).

Application/Control Number: 10/801,544 Page 10

Art Unit: 1634

24. In view of the teachings of Wijangco et al., claims 1-3, 7 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent 4,863,582 (Wijangco et al.).

Conclusion

- 25. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bradley L. Sisson whose telephone number is (571) 272-0751. The examiner can normally be reached on 6:30 a.m. to 5 p.m., Monday through Thursday.
- 26. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ram Shukla can be reached on (571) 272-0735. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
- 27. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

Art Unit: 1634

like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
